Depok, West Java, Indonesia, 16439

An undergraduate student in Information Computer Technology at Asia e University. Experienced as a Fullstack Developer skilled in HTML, CSS, JavaScript, PHP, React.js, and Laravel. Recently completed a Fullstack Web Developer bootcamp and a German B1 language course. Currently deepening technical expertise through online courses while exploring home servers to streamline and manage my personal digital ecosystem.

Work Experience

Nuansa Grafika – Internship

Frontend Web Developer

(September 2025 – December 2025)

- Designed and developed a fully static company profile website for a graphic design & printing company from scratch, deployed on <https://nuansa-grafika.vercel.app/>.
- Built the entire UI using React.js and Tailwind CSS, incorporating Framer Motion for smooth animations, Lucide React for icons, and a custom animated particle background component.
- Implemented key sections including Hero, Products & Services (22 products across 9 categories with filterable grid), About Us, Customer Testimonials with infinite-scroll animation, FAQ accordion, and an embedded Google Maps contact section.
- Integrated a WhatsApp-based ordering CTA system enabling direct customer inquiries for each product, with a floating WA button for quick contact.
- Ensured full mobile responsiveness and cross-device compatibility with smooth scroll navigation and a hamburger menu for mobile views.

Frisidea Tech – Internship Contract

Full-stack Web Developer

(September 2024 – May 2025)

- Developed a career page web application from scratch, including frontend, backend, and admin panel, using Vue.js, Tailwind CSS, and Laravel 11, then deployed it to a live domain: <https://careers.frisidea.com>.
- Configured and deployed multi-project server infrastructure, including architecting admin dashboard for dating application with proper security configurations and performance optimization.
- Engineered dynamic API integrations collaborating with senior developers to deliver real-time data rendering on frontend, ensuring efficient data flow and optimal user experience.
- Enhanced legacy web applications by implementing responsive design patterns with Tailwind CSS, resolving cross-device compatibility issues and improving mobile user experience by 40%

Personal News Portal– Freelance

Full-stack Web Developer

(December 2023 – February 2024)

- Designed and developed full-stack news portal from UI/UX prototyping in Figma to production deployment using Laravel and Tailwind CSS with MySQL database architecture
- Implemented feature-rich content management system supporting trending categories, advanced search filtering by title/date/tag, embedded video integration, and interactive engagement features (likes, comments) with real-time updates
- Built role-based admin panel with hierarchical access control distinguishing between editors (content CRUD only) and administrators (full system access), ensuring content workflow security and data protection

House of Representatives Republic Indonesia – Internship

Full-stack Android and web Developer Intern

(June 2023 – July 2023)

- Developed native Android attendance application following design specifications using Android Studio and Kotlin, integrating with backend REST API for real-time attendance tracking across government facilities
- Architected web admin interface using CodeIgniter 4 framework, implementing comprehensive attendance management dashboard with data visualization and reporting capabilities

- Optimized database infrastructure by restructuring PHPMyAdmin-driven schemas and building robust CRUD API with CodeIgniter 4, improving query performance by 35% and ensuring seamless Android-web synchronization

Project Experience

Realtime Election Management System – University project

Full-stack Developer

(January 2025 – September 2025)

- Designed and built a web-based hierarchical election management system supporting multi-category voting scenarios (e.g., Movie Awards with multiple sub-categories), with each sub-election maintaining an independent one-vote-per-user constraint.
- Tech stack: React.js + Tailwind CSS (frontend), Node.js + Express.js (backend), MongoDB Atlas (database), Socket.io (real-time updates), JWT authentication, bcrypt, Nodemailer email verification, and Multer for file uploads.
- Built 20+ RESTful API endpoints covering user auth, candidate CRUD, role-based access control (Voter / Admin / Super Admin), automated PDF report generation with charts and vote statistics, and a full VoteLog audit trail.
- Developed UI designs as low- and high-fidelity wireframes in Figma across two design iterations before implementation; final system closely reflected prototypes with a responsive, intuitive interface.
- Designed the system to handle concurrent users with sub-300ms API response targets; tested locally with all functional test cases passed, including cascade election activation and multi-category voting scenarios.

Android Food Ordering Application – University project

Android Developer

(May 2023 – May 2023)

- Designed and developed native Android ordering app implementing Material Design principles with Kotlin, creating intuitive user interface leveraging Android resource packages for responsive layouts
- Engineered local database solution using SQLite for efficient order management, implementing CRUD operations with optimized query patterns ensuring fast data retrieval and seamless offline functionality

Education

ASIA UNIVERSITY Malaysia

(Sept 2021 – May 2026)

Bachelor of ICT – GPA 3.56

CEP - CCIT Faculty of Engineering, University of Indonesia

(Sept 2021 – Sept 2023)

Diploma NIIT – GPA 3.00

Harisenin.com

(May 2024 – Oct 2024)

Fullstack Developer Bootcamp – GPA 4.00

Training & Certificate

Aws re/Start Program - Jakarta, Indonesia

(Oct 2025 - Dec 2025)

Codepolitan – West Java, Indonesia

(Feb 2024)

DevTown – Mumbai, India

(Feb 2023)

Cisco Academy – California, United states

(Jan 2023)
